## MYSON LST'S, PROVIDING COMFORT AND WELL-BEING

MYSON Low Surface Temperature (LST) radiators have been installed as part of a 25 week long, £1.1m refurbishment project for the ACCORD Hospice in Paisley, Scotland. The Hospice's facilities needed modernising to be able to provide the highest level of palliative care and support for patients, their families and staff.

With a range of complex and diverse requirements needed to meet the needs of patients, every aspect of the refurbishment was designed to assist the comfort, well-being and safety of patients and any anticipated future necessities.

Part of the refurbishment plans was to improve the heating equipment and systems of the facilities with an aim of making patients and their families as comfortable as possible to enjoy moments together in a safe and secure environment.

MYSON's range of LST radiators were chosen due to the high quality and reputation of the brand and being compliant with NHS Estates Guidance notes 1998 which means they are ideal for hospital and care home applications. The radiator's surface temperature is designed to remain below 43°C and are built with a safety conscious round steel casing, eliminating sharp edges and emitting any safety concerns.

David Coulter of Rybka explains "When we were required to provide a heating solution for the refurbishment of the ACCORD Hospice facility, we knew we needed to offer a solution at the top end of quality to match the projects modern facility aspirations.

MYSON's LST range have the accreditation and reputation that equates to quality and their flexible heating solutions meant that we would be able to supply the right heating

equipment, fit for purpose. The MYSON LST slim casing dimensions helped us provide a solution that was modern with a discreet profile. The level of safety provided by MYSON LSTs also meant that we were confident that patients and staff of the Hospice would be able to enjoy being in a safe and comfortable environment."

ACCORD Hospice was installed with MYSON LST radiators throughout the facility, from hallways to patient rooms and staffing areas. Connecting to the central heating system with MYSON LST specific valves creating the perfect system solution and the 10-year warranty provides peace of mind for the Hospice for years to come.

The MYSON LST family of radiators was recently extended to include the LST Vertical and are all available in a wide range of lengths, heights and types, including the slimmest panel LST on the UK market.
